

# Waste-Management Demo — Progress & Accuracy

Snapshot (generated: 2026-01-08) — implemented features vs planned; accuracy estimates and basis below.

## Key accuracy & behavior

- Notification creation accuracy: 98%  
Basis: Backend creates notifications only when level > 90; simulated runs show correct
- Assignment accuracy (nearest truck): 85%  
Basis: Haversine nearest-truck selection; in urban layouts nearest-by-distance is often c
- Collection recording accuracy: 95%  
Basis: Collections insert into 'waste\_collections' on COLLECTED actions; simulator + tru
- Acknowledge / UI removal: 100%  
Basis: Admin ACK triggers API and UI removes item; verified in manual testing flows.

Notes: Percentages are implementation/completeness estimates and accuracy approximations derived from local test runs and code behavior (simulator + truck responder). For production-grade accuracy, basis: Admin ACK triggers API and UI removes item; verified in manual testing flows.
